## Course Information

In this free online course ISO 27001:2013 - Dynamics of Information Security Management Systems (ISMS) you will learn about the information security management system that provides the basic framework on how to establish, implement, operate, monitor, review, maintain and improve information security systems. ISO 27001 identifies the requirements for a management system to safeguard its interests, and ensure that businesses prevent any security breach in the first place.

The course begins with an introduction to the business case for implementing ISMS, along with the standards related to different aspects of information security such as NIST, COBIT and ISO standards. It then discusses the important terms related to ISMS (as stated in ISO 27000), and covers the importance of information security in terms of the business case. The course also reviews the detailed requirements of the standard.

If you're considering working in information security as a future career, or if you're a professional seeking to learn about the management system to have information security in place, then this clear and simple course is for you. Understanding these core information security concepts is of vital importance for all professionals working in any industry. So, start this free online course today and in just 4 hours you'll be acquainted with the information security operation controls.
